NON-INVASIVE,
SENSIBLE
ALTERNATIVE
CANCER
TREATMENTS
FOR THE SKIN.

SENSUSHEALTHCARE.COM

THE SRT-100™ IS A ***SENSITIVE*** SOLUTION THAT ENRICHES LIVES.

As healthcare advocates who understand the serious risks, complications and side effects that can accompany the surgical intervention of skin cancer, we began a mission to provide patients and physicians with alternative cancer treatments—specifically, a non-surgical solution for basal cell carcinoma treatment and squamous cell carcinoma treatment.

We are honored to offer the SRT-100™. Inspired by the tried-and-true Superficial Radiation Therapy (SRT) systems that were once the proven gold standard among dermatologists and radiation oncologists, our state-of-the-art system is ideal for basal cell carcinoma treatment and squamous cell carcinoma treatment.

With a compact 30"x30" footprint, the mobile unit delivers a precise and calibrated dose of SRT that penetrates only five millimeters below the skin's surface—making it one of the safest and most effective alternative cancer treatments available. Unlike more powerful radiation devices, the SRT-100™ carefully destroys malignant skin cancer cells while preserving healthy tissue.

EXPLORE A NON-SURGICAL OPTION

By delivering a precise, calibrated dose of Superficial Radiation Therapy that only goes skin deep, patients can be safely treated right in their physician's office. Each treatment takes only a few minutes and is virtually painless.

Low-dose radiation effectively destroys basal cell carcinoma and squamous cell carcinoma, as well as the non-malignant tumor cells that cause keloids. Best of all, it doesn't involve cutting, bleeding or stitching. With the SRT-100™, there is no need for anesthesia, no risk of infection or scarring, no need for reconstructive plastic surgery. Patients heal quickly and don't have downtime or lifestyle restrictions following treatment.
